

RAMZI TEBER

Cybersecurity Engineer

+216 52207714 | teberramzi@gmail.com | sl1nk.com/ramzi-teber-portfolio | linkedin.com/in/ramzi-teber | Tunis, Tunisia

SUMMARY

Cybersecurity engineering student designing AI-driven security tools and contributing to enterprise environment hardening. Targeting a Junior Security Consultant position, with a focus on cyber resilience, applied security, and AI-enriched managed services.

EXPERIENCE

Full-Stack Developer

Solution Group

07/2023 – 02/2025 | Tunis, Tunisia

- Design and development of a structured client-server application (Angular v20+) ensuring reliable and consistent data flows across the system.
- Implementation of modular back-end logic in PHP with clear separation of concerns, enhancing maintainability, scalability, and technical readability.
- Corrective and evolutionary maintenance on production systems, with diagnosis and resolution of technical incidents via Git/GitHub workflows.

Cybersecurity Engineering Intern

Attijari Bank

06/2026 – 07/2026 | Tunis, Tunisia

- Development of a full-stack automated penetration testing platform (React 19 / TypeScript frontend, Node.js API server) orchestrating a Python analysis engine that chains 10 sequential phases of reconnaissance, vulnerability scanning, and report generation.
- Integration of industry-standard offensive tools (Nmap, Gobuster, Nikto, SQLmap, SSLscan, WhatWeb, Wafw00f) into an automated engagement pipeline with real-time tracking and CVSS vulnerability scoring.
- Concept originating from a 2-month internship at the Attijari Bank Digital Center (Tunis), applying concrete exposure to banking sector infrastructure and security practices to the design of the tool.
- Tools: React, TypeScript, Node.js, Python, Nmap, Gobuster, Nikto, SQLmap, SSLscan.

EDUCATION

Engineering Degree

TEK-UP

09/2024 – Present

- Information Systems & Networks Security

Bachelor's Degree in Computer Science

Faculty of Sciences of Tunis (FST)

09/2020 – 07/2023

- Computer Systems Engineering

SKILLS

Detection & Security Operations

Wazuh SIEM SOC Operations Threat Detection OWASP Top 10 Burp Suite

Systems, IAM & Hardening

Linux Windows Server Active Directory GPO Docker Git CI/CD AWS IAM EC2 S3

Automation, AI & Development

Python Scikit-learn LangChain RAG / LLM APIs

PROJECTS

AI-Powered Intelligent SOC

2025 | Academic Project

- Design of a complete Security Operations Center (SOC) architecture integrating Wazuh SIEM for real-time log collection and alert triage across heterogeneous endpoints.
- Development of a Python Machine Learning module (Isolation Forest + Scikit-learn) for automatic anomaly detection and alert classification.
- Construction of automated response playbooks to reduce analyst workload and Mean Time To Respond (MTTR), aligned with managed services and continuous security operations improvement needs.
- Tools: Wazuh, Python, Scikit-learn, ELK Stack, Kaggle, Kali Linux, Ubuntu, VirtualBox.

LLM-Powered Security Assistant (RAG)

2025 | Academic Project

- Built a Retrieval-Augmented Generation assistant querying a cybersecurity knowledge base in real time, providing contextual support for security analysis and decision-making.
- Designed a modular asynchronous architecture with LangChain to produce more accurate and contextualized security responses, with attention to hallucination reduction.
- Tools: Python, LangChain, Groq API, RAG, Streamlit.

Active Directory Hardening

2025 | Academic Project

- Secured an Active Directory environment for 50+ users: multi-level privilege model, MFA prerequisites, privileged account auditing, and Group Policy hardening in accordance with CIS Benchmarks.
- Documented the hardening process as a reproducible checklist, aligned with ISO 27001 controls and usable for Zero Trust and cyber resilience roadmaps.
- Tools: Windows Server 2019, AD DS, GPO, PowerShell.
